

A Poor Way to Pay for Medicaid

New York's policy of requiring counties to pay a sizable share of Medicaid costs is out of step with other states and results in an inequitable distribution of those costs among taxpayers.

NYS's policy requires counties with larger populations of low income residents to pay more towards Medicaid costs relative to their income.

Medicaid Spending per \$1000 of Personal Income	Poverty Rate	Medicaid Spending per \$1000 of Personal Income			
Six Highest Counties		Six Lowest Counties			
New York City	\$11.07	18.9%	7.8%	\$3.00	Dutchess
Allegany	\$7.41	16.7%	5.6%	\$2.93	Suffolk
St. Lawrence	\$7.38	16.4%	7.4%	\$2.65	Westchester
Chautauqua	\$7.37	16.2%	6.6%	\$2.46	Saratoga
Sullivan	\$7.07	13.9%	5.0%	\$2.37	Nassau
Fulton	\$7.00	16.4%	6.9%	\$1.63	Putnam

What does this mean? Taxpayers with equivalent incomes, but living in different counties, end up paying widely differing amounts on average to Medicaid through their local taxes. The bars below show average local Medicaid cost for taxpayers with \$75,000 annual income in neighboring counties.
